RATING YEAR	2022
VEHICLE TYPE	Small SUV
ENGINE TYPE	Battery Electric Vehicle (BEV)
BUILT FROM	AUS: September 2023 NZ: October 2023
ON SALE FROM	November 2023
SERIES	N/A
AIRBAGS	Dual frontal, side chest, side head, centre

The Renault Megane E-Tech was introduced in Australia and New Zealand in November 2023. This ANCAP safety rating applies to all variants.

Dual frontal, side chest-protecting and side head-protecting (curtain) airbags are standard. A centre airbag which provides added protection to front seat occupants in side impact crashes is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User and Junction Assist), as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and an advanced speed assistance system (SAS) are standard on all variants.

32.61 POINTS
OUT OF 38

The passenger compartment of the Renault Megane E-Tech remained stable in the frontal offset (MPDB) test. Dummy readings indicated MARGINAL protection for the driver's chest and ADEQUATE protection for the lower legs. Protection was GOOD for all other critical body regions for both the driver and front passenger.

The front structure of the Renault Megane E-Tech presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 1.69 point penalty was applied.

In the full width frontal test, protection of the driver dummy was ADEQUATE for the chest and GOOD for all other critical body regions. Protection was ADEQUATE for the neck and chest of the rear passenger with GOOD protection of all other critical body areas

In the side impact test, protection offered to all critical body regions of the driver was GOOD. In the oblique pole test, protection was ADEQUATE for the chest of the driver and GOOD for all other critical body regions.

The Renault Megane E-Tech is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impacts and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the far side impact tests was assessed as ADEQUATE for the vehicle-to-vehicle impact scenario and MARGINAL for the vehicle-to-pole scenario.

A Rescue Sheet, providing information for first responders in the event of a crash is available, and a multi-collision braking system is not fitted.

CHILD OCCUPANT PROTECTION

88%

43.14 POINTS
OUT OF 49

In the frontal offset test, protection of the neck of the 10 year dummy was MARGINAL, while the protection offered to all other critical body regions of both the 6 and 10 year dummies was GOOD.

In the side impact test, protection of all critical body areas was GOOD for both child dummies.

The Renault Megane E-Tech is fitted with lower ISOFix anchorages on the rear outboard seats and top tether anchorages for all rear seating positions.

A lower ISOFix anchorage and top tether anchorage suitable for the installation of forward-facing child restraints is fitted to the front passenger seat. Rearward-facing child restraints however must not be installed in the front passenger seating position.

Installation of typical child restraints available in Australia and New Zealand showed most child restraints could be accommodated in most seating positions, though the Type A capsule could not be correctly installed in the centre rear position.

* Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.

^ The above list of child restraints has been selected to provide a general indication of the rated vehicle's ability to accommodate various CRS types. ANCAP does not endorse or recommend any one CRS brand or model, nor does it rate the safety of child restraints.

65%

35.44 POINTS
OUT OF 54

The bonnet of the Renault Megane E-Tech provided GOOD or ADEQUATE protection to the head of a struck pedestrian over most of its surface, with MARGINAL and POOR results recorded at the base of the windscreen and the stiff windscreen pillars and front edge of the bonnet surface.

Protection of the pelvis area was mostly WEAK and POOR, while the bumper showed GOOD results for leg impacts.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to pedestrians and cyclists. Testing of this system showed GOOD performance in forward pedestrian test scenarios. The AEB Backover system was not expected to score points in the test scenarios, and tests of this system were therefore not conducted. In cyclist test scenarios, the AEB system offered GOOD performance.

The Renault Megane E-Tech is fitted with an autonomous emergency braking (AEB) system capable of functioning at highway speeds and a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and a blind spot monitor (BSM).

Tests of the AEB (Car-to-Car) system showed ADEQUATE performance, with collisions avoided or mitigated in all scenarios, however no points were scored for tests with a stationary target, as the required prerequisite was not achieved in the whiplash testing. GOOD performance was shown in AEB Junction Assist tests, where the test vehicle can autonomously brake to avoid crashes when turning across the path of an oncoming vehicle.

Tests of LSS functionality showed GOOD performance in LKA scenarios. However, the vehicle does not intervene to prevent lane changes with an overtaking vehicle, and therefore performance for ELK was assessed as ADEQUATE.

A speed assistance system (SAS) with speed limit information function (SLIF) is standard, informing the driver of the local speed limit and allowing the driver to manually set the speed accordingly.

A seatbelt reminder system with occupancy detection is fitted to all seating positions. A driver drowsiness monitor system is fitted as standard.

MODEL VARIANTS:

ANCAP safety ratings do not automatically extend to variants that have different body styles, engine configurations, driven wheels or occupant restraint systems (e.g. fewer airbags). In these cases, ANCAP considers technical evidence submitted by manufacturers before deciding on the extension of a rating to additional variants of a model.

RATING YEAR (DATESTAMP):

The Rating Year denotes the year requirements against which a vehicle has been assessed. The Rating Year is determined by ANCAP and, for vehicles rated from 2018, the Rating Year is the year in which the vehicle was tested.

~ Specifications & availability subject to change. Please check with the vehicle manufacturer for confirmation of vehicle specification.
