RATING YEAR	2021
VEHICLE TYPE	Large Car
ENGINE TYPE	Battery Electric Vehicle (BEV)
BUILT FROM	July 2022
ON SALE FROM	August 2023
SERIES	V297
AIRBAGS	Dual frontal, side chest, side head, centre, driver knee

The Mercedes-Benz EQS was introduced in Australia and New Zealand in August 2023. This ANCAP safety rating applies to the EQS 450 4MATIC. The EQS AMG 53 4MATIC+ is unrated.

Dual frontal, side chest-protecting and side head-protecting (curtain) airbags, as well as a driver knee airbag, are standard. A centre airbag which provides added protection to front seat occupants in side impact crashes is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User, Junction Assist and Backover) as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and an advanced speed assistance system (SAS) are standard equipment.

36.61 POINTS
OUT OF 38

The passenger compartment remained stable in the frontal offset (MPDB) test. Dummy readings indicated ADEQUATE protection for the lower legs of both the driver and front passenger. Protection was GOOD for all other critical body regions for both the driver and front passenger.

The front structure of the Mercedes-Benz EQS presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 1.78 point penalty was applied.

In the full width frontal test, protection was GOOD for all critical body regions for both the driver and rear passenger and maximum points were scored.

In the side impact test and the oblique pole test, protection offered to all critical body regions was GOOD and the vehicle scored maximum points in these tests.

The Mercedes-Benz EQS is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impacts and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the far side impact tests was assessed as GOOD for the vehicle-to-vehicle impact scenario, and ADEQUATE in the vehicle-to-pole scenario.

A Rescue Sheet, providing information for first responders in the event of a crash is available, and a multi-collision braking system is fitted.

In both the frontal offset and side impact tests, protection was GOOD for all critical body areas for both the 6 year and 10 year child dummies.

The Mercedes-Benz EQS is fitted with lower ISOFix anchorages on the rear outboard seats and top tether anchorages for all rear seating positions.

Installation of typical child restraints available in Australia and New Zealand showed that all of the selected child restraints could be accommodated in each of the second row seating positions and full points were scored for this assessment.

* Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.

^ The above list of child restraints has been selected to provide a general indication of the rated vehicle's ability to accommodate various CRS types. ANCAP does not endorse or recommend any one CRS brand or model, nor does it rate the safety of child restraints.

The Mercedes-Benz EQS has an 'active' bonnet. Sensors detect when a pedestrian is struck and actuators lift the bonnet to provide greater clearance from stiff components in the engine bay. The vehicle was tested with the bonnet in the raised position and GOOD or ADEQUATE results were recorded over most of the bonnet area with some WEAK and POOR results recorded at the base of the windscreen and on the windscreen pillars. Protection of the pelvis was mixed, with areas of GOOD, MARGINAL and POOR performance, while the bumper provided GOOD protection to pedestrians' legs.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to pedestrians and cyclists. Testing of this system showed GOOD performance in forward and reverse pedestrian test scenarios. GOOD performance was also seen in cyclist test scenarios, with collisions avoided or mitigated in most scenarios.

HEAD IMPACTS	16.88 (out of 24)
UPPER LEG IMPACTS	2.85 (out of 6)
LOWER LEG IMPACTS	6.00 (out of 6)

The Mercedes-Benz EQS is fitted with an autonomous emergency braking (AEB) system capable of functioning at highway speeds, a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and blind spot monitoring (BSM).

Tests of its AEB (Car-to-Car) system showed GOOD performance, including in some of the AEB Junction Assist test scenarios where the test vehicle can autonomously brake to avoid crashes when turning across the path of an oncoming vehicle.

Tests of LSS functionality showed GOOD performance in the LKA test scenarios, while performance in ELK scenarios was ADEQUATE.

A speed assistance system (SAS) with speed limit information function (SLIF) is standard, informing the driver of the local speed limit and allowing the driver to accept the change in speed accordingly.

A seatbelt reminder system is fitted to all seating positions, however occupancy detection is not available for rear seating positions. A driver drowsiness monitor system is fitted as standard.

MODEL VARIANTS:

ANCAP safety ratings do not automatically extend to variants that have different body styles, engine configurations, driven wheels or occupant restraint systems (e.g. fewer airbags). In these cases, ANCAP considers technical evidence submitted by manufacturers before deciding on the extension of a rating to additional variants of a model.

RATING YEAR (DATESTAMP):

The Rating Year denotes the year requirements against which a vehicle has been assessed. The Rating Year is determined by ANCAP and, for vehicles rated from 2018, the Rating Year is the year in which the vehicle was tested.

~ Specifications & availability subject to change. Please check with the vehicle manufacturer for confirmation of vehicle specification.
