RATING YEAR	2021
VEHICLE TYPE	Medium SUV
ENGINE TYPE	Battery Electric Vehicle (BEV)
BUILT FROM	NZ: May 2023 AU: September 2024
ON SALE FROM	NZ: October 2023 AU: November 2024
SERIES	iV
AIRBAGS	Dual frontal, side chest, side head, centre

The Skoda Enyaq was introduced in New Zealand in October 2023 and Australia in November 2024. This ANCAP safety rating applies to all variants.

Dual frontal, side chest-protecting and side head-protecting (curtain) airbags are standard. A centre airbag which provides added protection to front seat occupants in side impact crashes is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User and Junction Assist) as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and blind spot monitoring (BSM) are standard.

NOTE: Installation of child restraints in the centre seating position of the second row of New Zealand variants is not recommended as there is no top tether anchorage.

ADULT OCCUPANT PROTECTION

94%

36.01 POINTS
OUT OF 38

The passenger compartment of the Skoda Enyaq remained stable in the frontal offset (MPDB) test. Protection was GOOD for all critical body regions of both the driver and front passenger, except the lower legs of the front passenger where protection was ADEQUATE.

The front structure of the Skoda Enyaq presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 1.14 point penalty was applied.

In the full width frontal test, protection was ADEQUATE for the chest of both the driver and the rear passenger, and protection of all other critical body regions was GOOD.

In the side impact test and the oblique pole test, protection offered to all critical body regions was GOOD and the Skoda Enyaq scored maximum points in these tests.

The Skoda Enyaq is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impacts and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the far side impact tests was assessed as ADEQUATE for the vehicle-to-vehicle impact scenario and MARGINAL for the vehicle-to-pole scenario.

Rescue Sheets providing information for first responders in the event of a crash are available, and a multi-collision braking system is fitted.

43.81 POINTS
OUT OF 49

In the frontal offset and side impact tests, protection of the 10 year and 6 year dummies was GOOD and the Skoda Enyaq scored maximum points in these tests.

The Skoda Enyaq is fitted with lower ISOFix anchorages and top tether anchorages on the rear outboard seats. A top tether anchorage is also fitted to the centre rear seating position of Australian variants.

Installation of typical child restraints available in Australia and New Zealand showed most child restraints could be accommodated in most rear seating positions, though one of the booster seats could not be correctly installed in the centre rear position.

A lower ISOFix anchorage and top tether anchorage suitable for the installation of forward-facing child restraints is fitted to the front passenger seat of New Zealand vehicles. Rearward-facing child restraints however must not be installed in the front passenger seating position.

DYNAMIC TEST (FRONT)	16.00 (out of 16)
DYNAMIC TEST (SIDE)	8.00 (out of 8)
RESTRAINT INSTALLATION	11.81 (out of 12)
ON-BOARD SAFETY FEATURES	8.00 (out of 13)

NOTE: Installation of child restraints in the second row centre seating position of New Zealand vehicles is not recommended as there is no top tether anchorage.

* Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.

^ The above list of child restraints has been selected to provide a general indication of the rated vehicle's ability to accommodate various CRS types. ANCAP does not endorse or recommend any one CRS brand or model, nor does it rate the safety of child restraints.

71%
38.35 POINTS
OUT OF 54

The bonnet of the Skoda Enyaq provided GOOD or ADEQUATE protection to the head of a struck pedestrian over most of its surface, with MARGINAL and POOR results recorded at the base of the windscreen, on the stiff windscreen pillars and front edge of the bonnet surface.

Protection of the pelvis was mixed, with areas of GOOD and POOR performance, while the bumper provided GOOD protection to pedestrian' legs.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to vulnerable road users such as pedestrians and cyclists. Testing of this system showed ADEQUATE performance in pedestrian forward test scenarios and cyclist test scenarios. The AEB system does not react to vulnerable road users in reverse (AEB Backover) or turning scenarios, and hence these tests were not conducted.

PEDESTRIAN IMPACT TEST (40 KM/H)

The Skoda Enyaq is fitted with an autonomous emergency braking (AEB) system capable of functioning at highway speeds, a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and blind spot monitoring (BSM).

Tests of the AEB (Car-to-Car) system showed GOOD performance with collisions avoided or mitigated in most scenarios. ADEQUATE performance was shown in AEB Junction Assist tests, where the test vehicle can autonomously brake to avoid crashes when turning across the path of an oncoming vehicle.

Tests of LSS functionality showed GOOD performance, including in several of the more critical emergency lane keeping test scenarios.

A speed assistance system (SAS) with speed limit information function (SLIF) is standard equipment. This system can automatically set the maximum speed of the vehicle or inform the driver of the local speed limit, allowing the driver to set the speed accordingly

A seatbelt reminder system with occupancy detection is fitted to all seating positions. A driver drowsiness monitor system not available.

MODEL VARIANTS:

ANCAP safety ratings do not automatically extend to variants that have different body styles, engine configurations, driven wheels or occupant restraint systems (e.g. fewer airbags). In these cases, ANCAP considers technical evidence submitted by manufacturers before deciding on the extension of a rating to additional variants of a model.

RATING YEAR (DATESTAMP):

The Rating Year denotes the year requirements against which a vehicle has been assessed. The Rating Year is determined by ANCAP and, for vehicles rated from 2018, the Rating Year is the year in which the vehicle was tested.

~ Specifications & availability subject to change. Please check with the vehicle manufacturer for confirmation of vehicle specification.
